Ocean - Wikipedia An ocean (from Ancient Greek Ὠκεανός, trans. Okeanós) is a body of saline water that composes much of a planet's hydrosphere. On Earth, an ocean is one of the major conventional divisions of the World Ocean. These are, in descending order by area, the Pacific, Atlantic, Indian, Southern (Antarctic), and Arctic Oceans. Oceans Information and Facts | National Geographic The ocean is a continuous body of saltwater that covers more than 70 percent of the Earth's surface. Ocean currents govern the world's weather and churn a kaleidoscope of life. Ocean pollution | National Oceanic and Atmospheric ... The majority of pollutants going into the ocean come from activities on land. Natural processes and human activities along the coastlines and far inland affect the health of our ocean. One of the biggest sources is called nonpoint source pollution , which occurs as a result of runoff.

Ocean.com Ocean.com. Earth's Oceans - EnchantedLearning.com THE OCEANS The Earth's oceans are all connected to one another. Until the year 2000, there were four recognized oceans: the Pacific, Atlantic, Indian, and Arctic. In the Spring of 2000, the International Hydrographic Organization delimited a new ocean, the Southern Ocean (it surrounds Antarctica and extends to 60 degrees latitude. Ocean - Britannica.com Ocean, continuous body of salt water that is contained in enormous basins on Earth's surface. When viewed from space, the predominance of Earth's oceans is readily apparent.
