Fractal encoding is a mathematical process used to encode bitmaps containing a real-world image as a set of mathematical data that describes the fractal properties of the image. Fractal image encoding with flexible classification sets ... Fractal image compression (FIC) technology is an interesting attempt at structure similarity-based image compression. It has been widely applied in many fields such as image encryption, image retrieval, image sharpening, and pattern recognition. However, overlong encoding time is the main difficulty.

AN INTRODUCTION TO FRACTAL IMAGE COMPRESSION An Introduction to Fractal Image Compression 5 This simple looking theorem tells us how we can expect a collection of transformations to define an image. 3. Why the name "Fractal" ... a fractal encoding of Lena along with a magnification of the original. 4. How much Compression can Fractal achieve?. A fractal image encoding method based on statistical loss ... The thinking of fractal image encoding was to find the relationship between subsets of the encoding image, and used the parameters of contractive affine transformation as the encoding file. This method had many benefits.
